## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to a handlebar cynchronization mechanism, classified in class 482, subclass 62.
  - II. Claims 12-19, drawn to a limb synchronization mechanism, classified in class 482, subclass 71.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as a system for synchronizing the movement of user's feet on an exercise ski simulator. See MPEP § 806.05(d).

3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 4.

The examiner notes that neither groups of claims recite handlebars or particular user engagement mechanisms. These claims may therefore be anticipated by art found outside the exercise classification.
